IMPORTANT:

This leaflet lists only the most common standard sizes. Other dimensions are available on request.

Magnetic method for fixing the flat face plate on request.

Installation instructions are included with the diffusers.

Application

The TROX HESCO displacement flow diffusers have been developed specifically for air supply in displacement flow ventilation systems. A wide range of different shapes ensures that they can be effectively integrated into the interior design.

TROX HESCO displacement flow diffusers are used where good ventilation efficiency is very important, i.e. the lowest possible pollutant contamination in combination with optimum thermal comfort in work areas and occupied spaces.

Technical Data

This document is sufficient for a quick selection (see example below). For a detailed layout please use the calculation software „Easy Product Finder“ or ask one of our sales staff.

Safety instructions

CAUTION!

Risk of injury from sharp edges and corners, ridges and thin-walled sheet metal parts!

- Proceed carefully with all work.
- Wear protective gloves, safety shoes and protective helmet.

WARNING!

Danger from incorrect use. Misuse of the product may lead to dangerous situations.

The product must not be used:

- in areas subject to explosion hazards;
- in the open air without sufficient protection against weather effects;
- in atmospheres that may have a damaging and/or corrosive effect on the product due to scheduled or unscheduled chemical reactions.

CAUTION!

Damage to the product due to improper handling. Check the device for damage and contamination prior to operation!

Improper handling may lead to considerable material damage of the product.

- Do not use any acid or abrasive cleaning agents.
- Adhesives from sticky tape may lead to colour damage.
- Excessive moisture may lead to colour damage and corrosion.
- Use only cleaning agents, greases and oils that are expressly specified.

FLAME RETARDANT

Construction · Perforation · Principle of operation · Example of quick selection

Construction

TROX HESCO displacement flow diffusers in standard construction are made of galvanised sheet steel. The face plate is perforated with 3 mm holes. The visible areas are powder coated (RAL 9010). Other RAL colours are available on request. They are maintenance-free because they do not use filter material. Customised versions are available. Size tolerances ± 2.5 mm.

In the standard construction TROX HESCO displacement flow diffusers are supplied ready to install.

The special nozzles with integral air deflector scoops are in plastic (polypropylene).

Round circular spigots ≤ 400 mm with lip seal.

Standard perforation (QL-BE: see page 26)

Perforation with checkered pattern

Example of quick selection

To simplify the process the data for the discharge velocities [m/s] and the sound power level L_w [dB(A)] are summarised in the following chart.

Nomenclature

- ‡ Flow rate
- v_0 Discharge velocity based on gross outlet area
- L_w Sound power level
- $v_0 = 0.10$ m/s
- $v_0 = 0.20$ m/s
- $v_0 = 0.30$ m/s
- $v_0 = 0.40$ m/s

m^3/h

m/s
dB(A)

Nozzles X30 and X60

$$C1 \text{ for } \ddagger \text{ in } \text{m}^3/\text{h} > \Delta p = \left(\frac{\ddagger}{Cx} \right)^2$$

$$C2 \text{ for } \ddagger \text{ in } \text{l/s}$$

Example: Type QL-WH-RO/

General technical information for the selection of TROX HESCO displacement flow diffusers

Displacement flow is different from mixed flow not only in that the discharge point is no longer in or near the ceiling area but also in that the air movement is driven by the thermal convection generated by users of the space, machines, computers etc. Because the outlets for displacement flow are normally in the occupied zone, the discharge velocities are very low compared to mixed flow. 0,1 to 0,2 m/s in comfort conditioning and up to a maximum of 0,5 m/s in industrial applications or situations where higher levels of activity occur .

The vertical temperature gradient is substantially different from that of mixed flow. While the room temperature with mixed flow is virtually the same from floor to ceiling, there is a clear temperature gradient with displacement flow. Thus Δt has less significance than with mixed flow. The room temperature with displacement flow is defined at any location outside the near zone $L_{0,2}$ at 1 m above the floor. The difference between supply air temperature t_{zL} and room temperature t_R is referred to as Δt_u . Please note for design in situations with mainly sedentary activities e.g. offices and schools, the supply air temperature in the occupied zone should not be less than 18°C and Δt_u 4 to 5K (in extreme cases 6K). For higher levels of activity i.e. standing , walking and industrial applications a Δt_u 5 to 7K (in extreme cases 8K) and a minimum supply air temperature of 16°C are acceptable.

In the interests of thermal comfort it is important that the temperature difference Δt_C (room temperature 1 m above the floor – temperature 0.1 m above the floor) does not exceed 2 K for comfort conditioning and 3 K for industrial applications.

We will be pleased to assist you with the concept and design.

Temperature conditions: Nomenclature

Q	Watt	Heat load
\dot{v}	m^3/h	Supply flow rate
\dot{v}_{m^2}	$\text{m}^3/\text{h}, \text{m}^2$	Supply flow rate per m^2 floor area
ρ	kg/m^3	Air density
c_p	$\text{kJ}/\text{kg}, \text{K}$	Specific heat
h_R	m	Room height
t_z	$^{\circ}\text{C}$	Supply air temperature
t_{h1}	$^{\circ}\text{C}$	Air temperature at approx. 0.1 m above the floor
t_{h2}	$^{\circ}\text{C}$	Room temperature at approx. 1 m above the floor
t_A	$^{\circ}\text{C}$	Extract air temperature
Δt	K	Difference between extract air temperature and supply air temperature
Δt_1	K	Difference between floor air temperature at approx. 0.1 m above the floor and supply air temperature
Δt_u	K	Difference between room temperature and supply air temperature
Δt_C	K	$(t_{h2} - t_{h1})$ Comfort – Temperature difference
$L_{0,2}$	m	Length of near zone Near zone length defines the boundary around the displacement diffuser, within which the air velocity and temperature near the floor are outside normal comfort criteria

Temperature conditions: Comfort conditioning

Determination of the temperature conditions in the room and the flow rate on the basis of the heat load

Air density ρ = 1.20 kg/m³
 Specific heat c_p = 1.004 kJ/kg, K
 Room air temperature t_{h2} at approx. 1 m above floor

Flow rate $\ddagger = \frac{3600 \times Q}{\Delta t \times c_p \times \rho}$ [m³/h]

Δt = extract air temperature - supply air temperature
 Δt_u = room air temperature - supply air temperature
 Δt_1 = floor air temperature - supply air temperature

Example:

Given
 Area 48 m² A
 Room height 2.8 m h_R
 Heat load 1.8 kW Q
 Supply air temperature 18°C t_Z
 Room temp. (approx. 1 m above floor) 23°C t_{h2}

Sought

Δt_u Δt t_A \ddagger \ddagger_{m^2} Δt_1 t_{h1} Δt_C

Result

Calculate	1) Δt_u	= $t_R - t_{ZL}$	= 23 - 18	= 5 K
Graph centre	2) Δt	= at h_R 2.8 m and $\Delta t_u = 5$ K		= 7.4 K
Calculate	3) t_A	= $t_Z + \Delta t$	= 18 + 7.4	= 25.4 K
Graph left	4) \ddagger	= at $\Delta t = 7.4$ K and $Q = 1.8$ kW		= 730 m ³ /h
Calculate	5) \ddagger_{m^2}	= 730/48		= 15.2 m ³ /h, m ²
Graph right	6) Δt_1	= at 7.4 K and $\ddagger_{m^2} = 15.2$ m ³ /h, m ²		= 3 K
Calculate	7) t_{h1}	= $t_Z + \Delta t_1$	= 18 + 3	= 21°C
Calculate	8) Δt_C	= $(t_{h2} - t_{h1})$ 23 - 21		= 2 K

Temperature conditions: Industrial applications

Determination of the temperature conditions in the room and the flow rate on the basis of the heat load

Air density ρ = 1.20 kg/m³
 Specific heat c_p = 1.004 kJ/kg,K
 Room air temperature t_{h2} at approx. 1 m above floor

Flow rate $\ddagger = \frac{3600 \times Q}{\Delta t \times c_p \times \rho}$ [m³/h]

Δt = extract air temperature - supply air temperature
 Δt_u = room air temperature - supply air temperature
 Δt_1 = floor air temperature - supply air temperature

Example:

Given
 Area 150 m² A
 Room height 4.0 m h_R
 Flow rate 4500 m³/h ‡
 Room temp. (approx. 1 m above floor) 24°C t_R
 Δt_C 3 K

Sought

\ddagger_{m^2} Δt_{max} Δt_1 Δt_u t_z t_A t_{h1} Q

Result

Calculate	1)	\ddagger_{m^2}	= 4500/150				= 30 m ³ /h, m ²
Graph right	2)	Δt_{max}	= at 30 m ³ /h, m ² and $\Delta t_C = 3$ K				= 8.4 K
	3)	Δt_1					= 2.3 K
Graph centre	4)	Δt_u	= at $\Delta t = 8.4$ K and h _R = 4.0 m				= 5.3 K
Calculate	5)	t_z	= $t_{h2} - \Delta t_u$	= 24 - 5.3			= 18.7°C
Calculate	6)	t_A	= $t_z + \Delta t$	= 18.7 + 8.4			= 27.1°C
Calculate	7)	t_{h1}	= $t_z + \Delta t_1$	= 18.7 + 2.3			= 21°C
Graph left	8)	Q	= at $\ddagger = 4500$ m ³ /h and $\Delta t = 8.4$ K				= 12.7 kW

Displacement flow - Extent of near zone (not for occupation)

Nomenclature

Correction if n-terminals are side by side (flat units only):
extent of near zone for n terminals = near zone for 1 terminal $\times n^{0.3}$

Example Type QL-WF-E/600×1000×115-450×90:

Given	
Width	0.6 m
Height	1.0 m
Flat units only, discharge direction	one way
Number of diffusers side by side	2
Discharge velocity	0.20 m/s
Δt_u	3 K und 5 K

Result	
Near zone from table for 1 unit	1.0 m (3 K) and 1.7 m (6 K)
2 diffusers side by side	$1.0 \times 2^{0.3} = 1.2$ m at 3 K
	$1.7 \times 2^{0.3} = 2.1$ m at 6 K

Flow rate control

QL-xx-Rx-x-M

1. Measure of pressure difference Δp_M

2. Conversion of pressure difference to $\rho = 1.20 \text{ kg/m}^3$

$$\Delta p_{M1.20} = \Delta p_M * \frac{1.20}{\rho_M}$$

3. Specify flow rate \ddagger

Tolerance $\pm 5\%$

$\Delta p_{M1.20}$	Flow rate \ddagger [m ³ /h]

Specification texts

General information

TROX HESCO displacement flow diffusers for optimum discharge of conditioned air to the room using the displacement flow principle. Completely uniform velocity profile with special nozzles with integral air deflection scoops.

Type QL-WE-E/ for installation in a wall, one way discharge

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated flat sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code). Rectangular connecting spigot.

Type QL-WE-RO/ for installation in a wall, one way discharge

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated flat sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code). Circular connecting spigot.

Type QL-WE-O/ for installation in a wall, one way discharge

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated flat sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code) Location: installation in a duct or false wall.

Type QL-WF-EO/ and Type QL-WF-RO/ for installation on a wall surface, one way discharge, also available with base and room height duct cover

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. For free standing installation. Compact welded construction. Perforated flat sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Rectangular connecting spigot.

Type QL-WF-EO/, rectangular connecting spigot

Type QL-WF-RO/, circular connecting spigot

Options: base and/or duct cover.

Type QL-BE-RO/ for installation in false floors

Air distribution plate, with geometrically arranged perforations, built into the connecting box to give equal air distribution to the floorplate. RAL 9011 as standard, Gloss level see Order Code. Perforated floorplate: robust, perforated and reinforced steel floor plate, powder coated according to architect's preference. Load capacity: 200kg over 215 x 215 mm. Connecting box made from galvanised steel sheet.

Type QL-WR-RO/ circular unit for freestanding installation without a duct, also available with base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code). Circular connecting spigot. Base on request.

Type QL-WH-RO/ and Type QL-WH-RO/.../K semi circular unit for installation on a wall surface without a duct, also available with base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Circular connecting spigot.

Type QL-WH-RO/ without a duct cover

Type QL-WH-RO/.../K0 Height 2000 mm, without extension

Type QL-WH-RO/.../Kx with a duct cover + extension for room heights to max. 3.50 m. Base on request.

Versions with checkered pattern (...K)

The following versions are also available with checkered pattern front panel:

- | | |
|---------------|--------------------|
| - QL-WE-EO-K/ | - QL-WH-RO-K/.../K |
| - QL-WE-RO-K/ | - QL-WV-RO-K/ |
| - QL-WE-O-K/ | - QL-WV-RO-K/.../K |
| - QL-WF-EO-K/ | - QL-WS-RO-K/.../K |
| - QL-WF-RO-K/ | - QL-WFM-EO-K/ |
| - QL-WR-RO-K/ | - QL-WFM-EO-K-2/ |
| - QL-WH-RO-K/ | - QL-WFM-EO-K-3/ |

Type QL-WV-RO/ and Type QL-WV-K-RO/.../K quarter-round unit for installation in a wall corner, also available with base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Circular connecting spigot.

Type QL-WV-RO/ without a duct cover

Type QL-WV-RO/.../Kx Height 2000 mm, without extension

Type QL-WV-RO/.../Kx with a duct cover + extension for room height to max. 3.50 m. Base on request.

Type QL-WS-RO/.../K segment shaped unit for installation on a wall surface with a duct cover, also available with base

Rear panel with connecting spigot of galvanised sheet steel. Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Circular connecting spigot.

Type QL-WS-RO/.../Kx Height 2000 mm, without extension

Type QL-WS-RO/.../Kx with a duct cover + extension for room height to max. 3.50 m. Base on request.

Type QL-WFM-EO-../ for installation on a wall surface, rectangular connecting spigot, also available with base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated flat sheet metal face providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Face with high-quality finish: aluminium borders and no visible screws. Rectangular connecting spigot. Option with base.

Type QL-WFM-EO/ one way discharge

Type QL-WFM-EO-2/ two way discharge, face and left or right

Type QL-WFM-EO-3/ three way discharge

Type QL-WFT-E/ installation on a wall surface with trapezoidal face, rectangular connecting spigot, one way discharge, without base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated face plate of trapezoidal metal sheet providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code), rear panel without powder-coating. Rectangular connecting duct.

Type QL-WQT-RO-2/ and Type QL-WQT-RO-3/ or square installation on wall with trapezoidal face, circular connecting spigot, two or three way discharge, without base

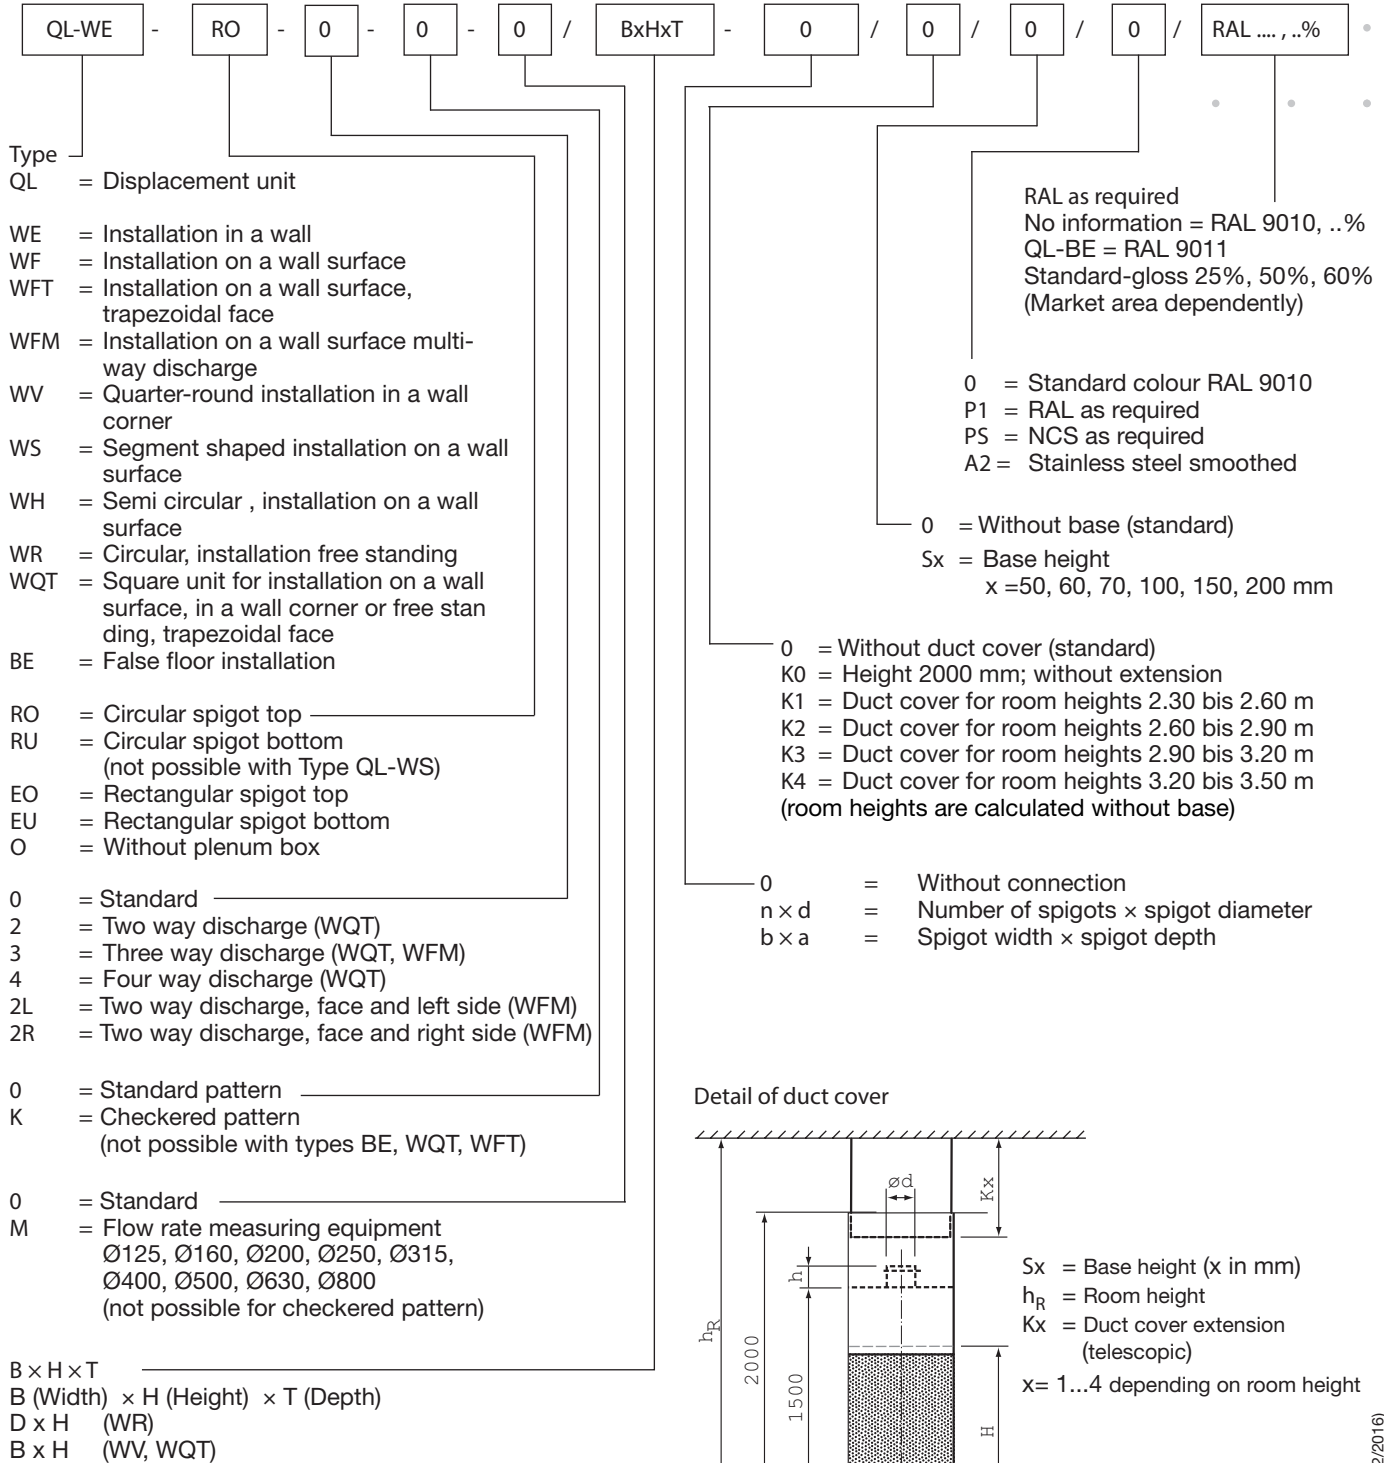

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated face plate of trapezoidal metal sheet providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code). Circular connecting spigot. As standard, non active faces are trapezoidal, not perforated sheet metal and are not painted. Paint finish on all surfaces at extra cost.

Type QL-WQT-RO-4/ for free standing installation with trapezoidal face, circular connecting spigot, four way discharge, without base

Air distribution face plate with integral geometrically arranged plastic nozzles with deflection scoops. Every nozzle provides a constant flow rate from the passing airstream and directs it to the face plate. Perforated face plate of trapezoidal metal sheet providing a low-turbulence low velocity discharge, galvanised sheet steel, powder-coated, standard colour white RAL 9010 or RAL colour optional, gloss (see order code). Circular connecting spigot.
